Sec. 106-22 – Fill Mitigation

Unless otherwise provided, no fill shall be permitted in FEMA Special Flood Hazard Areas (SFHA’s) and/or Community Defined (CD) SFHAs unless the fill is mitigated by excavation and meets the requirements in this section.

a) For all subdivision, mobile home parks, commercial, and industrial developments with proposed on-site excavation and fill construction (no imported or off-site fill) such as a detention pond, a before and after

development construction grading plan shall be provided to show no decrease in the existing flood volume storage capacity below the FEMA BFE and/or the Community Defined Flood Elevation (CD FE), whichever is higher along with the following restrictions:

- 1) Fill shall not be placed in any area in which doing so might impede the natural floodplain of existing open channels, ditches, or outfall locations.
 - 2) For mitigation purposes, no credit shall be given for the portion of excavation that is lower than adjacent open channels, ditches, or outfall locations.
 - 3) For cases in which an area or pond is utilized for both on-site stormwater detention and fill mitigation, no fill mitigation credit shall be given for that portion of the excavation required to detain the increase in runoff volume from the existing to proposed development conditions for the 100-year design storm.
- b) If the required storage volume is derived from an off-site source that is not part of the proposed development, such as the purchasing and use of mitigation credits, it shall be located in the same watershed as the proposed development and the BFE elevation at the off-site source shall not be greater than two feet higher than or two feet lower than the base flood elevation of the development site. A hydrologic and hydraulic analyses stamped and signed by a licensed Louisiana civil engineer shall be submitted to the Director of Public Works to show no decrease in the existing flood volume storage capacity below the FEMA BFE and/or the CD FE, whichever is higher, and the proposed encroachment would not result in any increase in flood levels within the community during the occurrence of the base flood discharge.
- 1) For the use of off-site fill mitigation credits, floodplain storage volume used for mitigation purposes shall be considered as a three-dimensional space between the ground elevation (or static water surface elevation for a wet pond) and the FEMA BFE and/or the CD FE, whichever is higher. All sales of fill mitigation credits shall be recorded in the West Baton Rouge Parish Clerk of Courts Office and provided to the Director of Public Works prior to approval of the final plat. The owner of the fill mitigation credits, through his licensed design professional, shall be responsible for tracking the balance of credits.
- c) Exemptions:
- 1) Building pads for Single-Family Residential:
 - a) slab(s) on grade construction. Fill mitigation is not required if the combined area of all buildings on the lot is no more than 5,000 square feet and the average height of fill is no more than 30 inches or the distance between natural grade and the FEMA BFE or CD BFE, whichever is higher.
 - b) Building pads for manufactured homes and pier/column construction. Fill mitigation is not required if the average height of fill for the building pad is no more than 24 inches above the natural grade under the elevated structure to facilitate drainage.
